8 November 1967

MEMORANDUM FOR: Chief, Cartography Division, Office of Basic and Geographic Intelligence

SUBJECT: Several More

1. Map No. 56648. With the importance of railroads in Rhodesia's economy, shouldn't they stand out a bit more? The screening is probably the problem - should have been solid.
2. Map No. 56732. On my copy, the Central Highway appears to be highlighted, but crudely.
3. Map No. 56790. An interesting map to prepare. I have a few observations. 1) The Demilitarized Zone should stand out more prominently (heavier pattern). 2) The choice of the water tone color doesn't strike me as "water." The reservoirs, being geometric in shape, appear to be some form of culture rather than part of the hydrography system (even though man-made in part). 3) The terrain, which is very important on this map, does not come through with impact. It gives me the impression of a large blow-up without enough contrast between hills and valleys. On this one, the hills should stand out in relation to the cease-fire lines.
4. Map Nos. 56876 and 56878. Why no indications as to scale and name of map series being indexed?
